Work in Progress

Capped and Screened: Does Rent Control Reshape Who Signs a Lease? *(JMP)*

When a binding rent cap is introduced in a regional rental market, are immigrant tenants screened out? Using the universe of registered rental contracts in Catalonia and a RD in time design around Spain's 2023 housing law, I find a substantial decrease in immigrant tenants' share in houses owned by corporations (-7 p.p.), with evidence of reallocation to unregulated sectors of the market.

When Leases Get Longer: Tenure Security in Rental Markets

with Jordi Jofre-Monseny, Rodrigo Martínez-Mazza, and Mariona Segú

Using Catalan administrative data and a regression discontinuity design, we evaluate Spain's 2019 reform extending the minimum rental lease from three to five or seven years. Lease lengths and medium-run tenant stability rise, but adjustment differs by landlord type: individual landlords absorb the change while some corporate landlords exit the market.

Mapping Far-Right Surge: Spanish Internal Migrations and VOX Support

with Andreu Arenas-Jal and Jordi Jofre-Monseny

Exploiting mid-20th century internal migration flows from Spanish municipalities to Catalonia, we show that places with a higher historical propensity to send migrants to Catalonia have lower VOX vote shares in the 2019 election. Survey evidence on personal ties to Catalonia points to the same pattern, extending contact theory to indirect contact via durable social networks.
